

```
C:\Users\Андрей>npm init
This utility will walk you through creating a package.json file.
It only covers the most common items, and tries to guess sensible defaults.
```

```
See `npm help json` for definitive documentation on these fields
and exactly what they do.
```

```
Use `npm install <pkg> --save` afterwards to install a package and
save it as a dependency in the package.json file.
```

```
Press ^C at any time to quit.
```

About to write to C:\Users\Андрей\package.json:
```

```
{
  "name": "andrewabr",
  "version": "2.0.0",
  "description": "bbjjo",
  "main": "lab3",
  "scripts": {
    "test": "pusk"
  },
  "repository": {
    "type": "git",
    "url": "ioij"
  },
  "keywords": [
    "keys"
  ],
  "author": "abr",
  "license": "UNLICENSED"
}
```

```
Is this ok? (yes) yes
```

Package.json

```
"lodash": "^4.16.6"
```

```
{
  "name": "andrewabr",
  "version": "2.0.0",
